

=====

CAC BARCODE SCANNER - STANDARD OPERATING PROCEDURE

=====

Reads CAC Code-39 barcodes, decides if the holder may be served, and tracks drinks per DoD ID against a configurable limit.

START Run BarScanner.exe (starts fullscreen).
SHORTCUTS F11 toggle fullscreen, Esc exit fullscreen, Ctrl+Q quit.
DATA LOCATION C:\Users\<you>\.cac_scanner\ (settings + all logs).
 Replacing BarScanner.exe with a newer build does NOT
 touch this folder - configuration survives upgrades.

DAILY USE (Scanner tab)

1. The verdict banner says "Ready to scan" in white. Cursor must be in the input box (auto-refocuses on tab change / startup).
2. Scan a CAC. The banner flashes:
 - GREEN "ALLOWED - Nth drink" - eligible; this scan IS counted.
 - RED "DENIED" + reason - banned, closed, category/branch not allowed, or limit reached. NOT counted.
 - RED "INVALID SCAN" - barcode malformed; try again.
3. Decoded grid below shows EDIPI, Category, Branch, drink count.
4. "Clear" only blanks the display - it does NOT undo a count.

UNLOCKING SETTINGS

Hours / Limits / Roster / Banned / Backup-Import tabs are LOCKED by default (red banner). Click "Unlock" - prompts for 2 DIFFERENT CACs. Both EDIPIs and every edit are written to the public audit log. Click "Lock" to re-lock manually.

AUTO-LOCK

Settings re-lock automatically 5 minutes after unlock. Status bar shows "Auto-locks in 5 minutes" when you unlock.

HOURS (Hours tab)

- Operating hours: set Open / Close (HH:MM 24-h). Drinks count only inside the window. Open == Close = 24h day. Close < Open crosses midnight (e.g. 20:00 -> 02:30).
- Rolling window: counts the last N hours regardless of clock; bar is never "closed" by clock in this mode.

LIMITS (Limits tab) Max drinks per session per EDIPI. Default 3.

ROSTER (Roster tab) Check the Categories (PCC) and Branches that may drink. Use All / None for bulk toggle.

BANS (Banned tab) Add EDIPI (10 digits). Optional Expires as YYYYMMDD; blank = permanent. Bans override category / branch / limit. "Remove selected" lifts a ban.

RESET (Reset tab) Wipes every EDIPI's count to 0 for the current window. Requires 2 distinct CACs. Each reset is logged publicly.

BACKUP (Backup tab)

- Export full backup: anyone can save a .zip of all settings + logs. The file CONTAINS EDIPIs and the ban list - protect it.
- Import full backup: requires unlock. REPLACES all settings and logs on this machine. Cannot be undone without another backup.

LOGS (Logs tab) Public, append-only record of every unlock, change, lock, reset, export, and import with timestamps and authorizing EDIPIs. Cannot be edited or deleted.

TROUBLESHOOTING

- Scans go to wrong field: click the input box on Scanner tab.
- Settings won't edit: click Unlock, scan 2 different CACs.
- Lost backup file: copy C:\Users\<you>\.cac_scanner\ manually.
